

Barley

South Peace

February 2017

These two pages show the results of our 2016 regional research trials conducted in the Peace Region. There was a total of 4 regional trials grown this year, the following graphs portray average plant height, physiological maturity and yield for both 6-row and 2-row barley.

In 2016, the weather station at the South Peace research farm recorded 423 ml of precipitation between May 1st and September 30th. 122 ml above average!
